EU LABELLING THRESHOLDS

For finished cosmetic products, fragrance allergens subject to individual labelling are generally declared when their concentration in the finished product exceeds:

Leave-On Products: 0.001% (10 ppm)

Rinse-Off Products: 0.01% (100 ppm)

The need to declare an allergen on the finished-product ingredient list therefore depends on both the concentration shown above and the percentage of this raw material used in the final formulation.

DECLARATION

Robertet explains that the figures for single raw materials are based on analytical results and supplier information, and generally reflect historical maximum values across different deliveries/production lots.

The manufacturer of the finished product remains responsible for assessing the complete formulation and ensuring its safety and regulatory compliance.
