Added fragrance allergens confirmed from available public Roseate documentation	None identified
Complete batch-specific quantitative EU allergen analysis	Not available from the public sources reviewed

EU LABELLING THRESHOLDS

Where an individually listed fragrance allergen is present in a finished cosmetic product, the applicable labelling threshold must be assessed according to the finished-product type.

Finished Product Type	Threshold
Leave-On Products	>0.001% (10 ppm)
Rinse-Off Products	>0.01% (100 ppm)

DECLARATION

Aromology declares that, based on the available product-specific identity and technical documentation for:

ROSEATE – IFF

Chemical Name: 9-Decen-1-yl Acetate

CAS Number: 50816-18-7

the material itself is not identified as an individually declarable EU fragrance allergen.

No intentionally added declarable fragrance allergens are identified in the public product specifications reviewed.

This statement does not replace a manufacturer-issued quantitative allergen certificate. The finished-product manufacturer remains responsible for assessing the final formulation and determining applicable cosmetic labelling requirements.
