

IFRA CONFORMITY STATEMENT

IFRA STANDARDS – 51st AMENDMENT

JASMIN SAMBACYLATE

(Robertet)

PRODUCT IDENTIFICATION

Item	Details
Product Name	Jasmine Sambacylate
Manufacturer	Robertet
Botanical Reference	<i>Jasminum sambac</i> (L.) Aiton
Product Type	Proprietary co-distilled perfumery speciality
Manufacturing Process	Co-distillation
Country of Origin	India
CAS Number	Proprietary mixture — refer to Robertet documentation
Applicable Standard	IFRA Standards up to and including the 51st Amendment
Issue Date	20 July 2026

IFRA STATUS

Jasmine Sambacylate is a proprietary Robertet co-distillation, rather than a chemically defined single substance.

A product-specific IFRA maximum-use table cannot be reliably established from the material's trade name alone because its compliance depends on:

The complete qualitative and quantitative composition.

The concentration of IFRA-restricted constituents.

Whether the jasmine-derived portion falls within the scope of an existing natural complex substance Standard.

The intended finished-product category.

Contributions from all other ingredients in the fragrance formula.

Robertet' s public catalogue confirms the material' s identity as an India-origin *Jasminum sambac* speciality, but it does not publish the product' s complete formulation or category limits.

IFRA DECLARATION

No universal IFRA maximum use level has been assigned in this statement. Finished fragrance assessment is required.

The finished-product manufacturer must use Robertet' s current product-specific IFRA Certificate to determine the maximum acceptable concentration for each applicable IFRA Category.

JASMINE SAMBAC STANDARD CONSIDERATION

The IFRA Standard for Jasmine Absolute (Sambac) covers jasmine sambac extract identified by CAS numbers 91770-14-8 and 1034798-23-6. However, the limits for pure Jasmine Sambac Absolute must not automatically be applied to Jasmine Sambacolate because the Robertet product is a proprietary co-distilled speciality with an undisclosed overall composition.

Application of the Jasmine Absolute Sambac Standard must be confirmed by Robertet' s regulatory documentation.

POTENTIALLY IFRA-RELEVANT CONSTITUENTS

Depending on the proprietary composition, the product may contain IFRA-regulated or specification-controlled materials such as:

- Benzyl alcohol.

- Benzyl benzoate.
- Benzyl salicylate.
- Linalool.
- Farnesol.
- Eugenol.
- Isoeugenol.
- Methyl eugenol.
- Geraniol.
- Limonene.
- Methyl anthranilate.
- Dimethyl anthranilate.
- Benzaldehyde.
- Benzyl cyanide / benzeneacetonitrile.
- Other proprietary fragrance constituents.

This is a screening list only and does not confirm presence or concentration.

CONDITIONS FOR IFRA CONFORMITY

Compliance requires:

1. Robertet' s current IFRA 51 conformity certificate for the precise product reference and batch.
2. Identification of the intended finished consumer-product category.
3. Calculation of the material' s concentration in the finished product.
4. Inclusion of restricted-constituent contributions from all formula ingredients.
5. Assessment of any Schiff bases, phototoxic constituents, prohibited substances or specification limits where applicable.
6. Maintenance of formulation and compliance records by the finished-product manufacturer.

CERTIFICATION STATEMENT

Printed 12/11/2025

Based on the information currently available, Jasmine Sambacylate may be used in fragrance formulations subject to:

- Robertet' s product-specific IFRA documentation.
- The restrictions applicable to its disclosed constituents.
- A complete finished-product safety assessment.
- The maximum acceptable concentration established for the relevant IFRA Category.

This document does not certify unrestricted use and is not a substitute for Robertet' s original IFRA Certificate.

CONCLUSION

No universal IFRA maximum use level has been assigned. Finished fragrance assessment required.

Robertet' s current product-specific IFRA 51 Certificate shall take precedence.
