CATEGORY 4 – FINE FRAGRANCE

For:

- Extrait de Parfum
- Parfum
- Eau de Parfum
- Eau de Toilette
- Cologne
- Solid perfume
- Fragrancing creams

the maximum acceptable concentration of the restricted substance CAS 68966-86-9 in the finished consumer product is 0.94%.

IMPORTANT CALCULATION FOR PERFUME FORMULATION

The 0.94% Category 4 limit applies to the finished product, not simply to the fragrance concentrate.

For example, if a finished Eau de Parfum contains 20% fragrance concentrate, the theoretical maximum concentration of Poivrol in that fragrance concentrate, based solely on this IFRA restriction, would be: $0.94 \div 0.20 = 4.70\%$ Poivrol in the fragrance concentrate

At 25% fragrance dosage: $0.94 \div 0.25 = 3.76\%$ Poivrol in the fragrance concentrate

Other formula restrictions can of course produce a lower allowable level.
